

OUR PHILOSOPHY IS TO PROVIDE A QUALITY DAY CARE PROGRAM IN A LEARNING AND LOVING ENVIRONMENT.

**THE MOST IMPORTANT TASK OF OUR CENTER IS TO LOVE
AND CARE ABOUT EACH CHILD.
THE CHILD WILL DEVELOP A SENSE OF SECURITY, BELONGING AND
SUPPORT.**

Our teachers will bring unconditional love and emotional security, a sense of routine and an opportunity to be creative and resourceful.

The Center is open for parents to visit and observe their child at any time. All children, regardless of ethnic background, race, color or religious beliefs, are equal to participate in our non-discriminating environment.

All daily activities are age and stage appropriate and will promote the individual child's physical, intellectual, emotional and social well-being and growth. We promote curiosity and exploration. We establish environment for learning and creativity.

The Center provides:

- Opportunities for individual self-expression.
- Recognition that each child is an individual.
- Respect for personal privacy.
- Respect for each child's cultural, ethnic, and family background, as well as the child's primary language or dialect.

The Teachers promote social development by providing:

- Guidance to children in developing and working out ways of getting along with one another.
- Staff interaction with children in ways, which emphasize and foster attitudes of mutual respect between adults and children.
- Staff behavior demonstrates respect for all other persons as individuals and appreciation of cultural and ethnic diversity.
- Teachers encourage children to do things independently, help with daily routines and offer a lot of comfort and love.

Our Educational Program is designed to provide a wide variety of learning opportunities for your child. Our curriculum introduces assortment of different topics; emphasizing reading, math and comprehension skills. The program is designed so it covers all aspects of learning. The children learn through playing and working on different projects, and activities. The children experience such areas of learning as: art, math, music, science, and social studies. We provide extra curriculum such as: ballet/exercise classes, and more in the future.

INFANTS

Learning takes place at the very beginning of an infant's life. At Arlington Children's Center our plan to help babies learn is an important part of caring for them. We offer activities that are carefully tailored for their special needs.

Teaching through care giving: love is our primary focus in caring for infants. Trained caregivers who love babies will nurture and cuddle your little one when undergoing care giving activities such as feeding, diapering, and holding. Talking to them will foster their language development, and smiling to them will help them learn to trust others while away from their parents. Learning through exploration: safety is our main concern when determining what toys, materials and equipment to provide. We offer a colorful environment, soft and easily sanitized toys and music that will foster the infants' curiosity and creativity. At ACC we accommodate the rapid changes and demand of the baby's first year and build confidence into their transition to toddler age. Finally, a complete record of your infant care will be provided at the end of the day including different activities such as sleeping, eating, and diapering.

TWO YEARS OLD

The "Just for twos" program is used to develop the child's language, gross motor and small motor skills. Self-discipline, cooperation and creative expression are fostered through play activities. Exploration of manipulative toys, books, indoor and outdoor such as play equipment and materials helps to develop the child's curiosity, creativity and independence. Art and music experiences with a variety of materials are an integral part of the program.

THREE YEARS OLD

The creative Preschool Program is the core of the three years old curriculum. Listening to stories, retelling events, dramatic play with puppets, music and movement experience help the child develop concepts and language skills necessary for future learning. A variety of play and art materials are provided for the child's exploration. Building with blocks, painting, drawing, cutting, putting puzzles together, and constructing with different materials foster the development of the child's small motor and problem solving skills, and also enhance his sense of creativity and self-expression. Daily writing exercises program introduces the three's to creating letters.

FOUR YEARS OLD

The four years old child is ready for the exploration of concepts in the areas of reading and math readiness, science and social studies, as well as the continued growth of language and physical development skills. Utilizing the creative Pre-Kindergarten Program, the child is presented with a thematic, hands-on approach to learning new skills and developing new awareness and abilities. Beginning phonics instruction is initiated when the child is ready for this skill. The child's curiosity, independence and self-confidence is fostered through the use of center play activities. Manipulative toys, art, music experiences, and games enhance the child's understanding and enjoyment of presented concepts.

THE FIVE YEARS OLD

The five years old child is ready for the development of reading, math and handwriting skills that will prepare him/her for the more formal learning environment of the elementary school. The program we use presents science, social studies, musical language, and physical development activities in a weekly thematic format. The reading readiness program focuses on phonic skills, and listening comprehension will be initiated for the child who demonstrates readiness for this skill. Manipulative approach to learning math is used to develop math concepts. Beginning handwriting skills are taught through the use of a specially designed handwriting program. Creativity, curiosity and confidence are developed through center play activities. Art experiences, manipulative materials, dramatic play, books and games enhance the child's concept development.
